Learning Management System
reimagining the way of learning

Shifting towards a more sustainable, accessible and engaging way of learning can be made possible through the use of a reliable and flexible learning management system.

Our Learning Platform UI and UX supports the user-centered design that enables the user to have a more seamless experience in navigating through the platform and access their training courses and resources.

Apart from the accessing digital learning assets, the use of LMS promotes:

Social Learning and Collaboration

Organise data and build custom reports relevant to your needs

Reminders and notifications for due dates and completion

Learner satisfaction with Anonymous feedback for comfort

These features help provide the full range of learning and development cycle that enhances learning with the latest features to ensure the best user experience for all learners, facilitators and administrators.

Accessibility

Users have the options to select their preferred language of the system interface. At the moment there are **140+ Languages** available in our LMS.

You can learn anytime and anywhere! One of the advantages of employing a learning platform is mobility - You can access your learning via **laptop, mobile phones and tablets**

Safe and Secure

Our Learning platform is hosted in a secure server which has completed independent third-party **ISO and Cloud Security Alliance (CSA)** audits to expand their certification portfolio.

The learning platform is accessed via URL through a web application firewall (WAF)which protects web applications from a variety of application layer attacks such as cross-site scripting (XSS), SQL injection, and cookie poisoning, among others.

Streamline Learning Management

Learners will benefit from gamification, branch scenarios and interactive sessions while Trainers and Administrators can easily group learners, assign courses and automatically track learner engagement across different activities that require completion or grading.

Learning journeys can be enhanced through automation, restriction and accessibility to create seamless learning experiences.

Support different learning modalities

Trainers can set up automatic grading for assessments and quizzes with a pass mark for a real-time feedback.

Different learning assets are easily uploaded and integrated within the LMS such as eLearning SCORMs, Audio/Podcasts, Videos, Images, PDF, Presentation Materials etc.

Our system supports self-paced, blended and hybrid learning. The best part is the Integrated Virtual Conferencing tool with Learning Analytics. This enables automatic attendance based on the duration attended or participation.
